ESPONSF

HUMANITARIAN SITUATION AND RESPONSE | EXTERNAL UPDATE

Overall Context

North Ethiopia Complex Crisis

- Starting from May 2023, the distribution of food supplies across the entire country has been suspended by USAID and the World Food Programme.
- This suspension will have a significant impact on numerous people across Ethiopia who rely on food aid for support.
- In response to the concerning issue of aid misuse in Ethiopia, both the Ethiopian and United States governments have announced their commitment to address the situation.
- According to the agencies, once the investigation is concluded and those responsible are held accountable, along with the implementation of rigorous control measures, food aid distribution is expected to resume. However, no specific timeline has been provided, rendering the suspension of food aid indefinite.

Afar

- People affected by recent conflict, flooding as well as drought in need of support in Afar
- Multisectoral response is critical for IDPs and returnees in the region.
- Safe and sustainable return to place of origin for those displaced because of the conflict remains a priority.
- The region has been grappling with two major disease outbreaks in the past months; dengue fever and malaria.
- Dengue fever cases in Afar increased by 8.5% to 3,800 cases in the week ending June 6th . Malaria cases also increased by 8%, with 91% of confirmed cases being severe and lifethreatening.

Amhara

- Multisectoral response is critical for IDPs and returnees in the region.
- Sky rocketing levels of malnutrition and reported shortage of nutritional supplements for the treatment of children under the age of five and pregnant and lactating women (PLW), means nutrition support is critical.
- Significant shortages in the availability of agricultural inputs needed to maintain the current crop season before the Kiremt rains
- People continue to flee Sudan to Ethiopia through Metema entry point in the Amhara region

- At least 55,619 people have entered Ethiopia from Sudan as of 25 June 2023..
- Due to limited partner participation and significant financing shortfalls, emergency support is falling short of the scope of the expanding needs.

Tigray

- Large number of IDPs and returnees as well as host communities impacted by conflict in need of continuous support.
- Without prompt food aid targeted at the most vulnerable individuals, there is a great concern that the region's food and nutrition security situation might get worse.
- The Kiremt rainy season, which runs from June to September and is the time between planting and harvest has arrived.
- The regional Interim Administration gave priority for IDPs relocation before the window for the planting season closes.
- The return of IDPs still depends on multisectoral assistance, including food assistance and agricultural inputs.
- The Government of Ethiopia and other humanitarian partners continue to support with food aid and dispatch of Therapeutic Supplementary Feeding Program (TSFP) for moderately malnourished children and mothers.

Climate and Hunger Crisis Situation

Impact of the recent drought

- Drought has severely affected the southern and southeastern regions of Ethiopia, leading to a continuous increase in food prices and unfavorable conditions for pastoralists.
- Recovery of livelihoods and lifesaving interventions are essential, especially considering the substantial loss of livestock, which will require significant time and
- The prevalence of malnutrition continues to rise, and outbreaks of cholera and measles persist in areas affected by drought. Since January 1, 2023, there have been over 192,741 cases of severe acute malnutrition (SAM), predominantly in drought-affected areas.
- Since January 1, 2023, there have been more than 21,230 suspected cases of measles and

219 deaths reported.

Cholera outbreaks have occurred in the Sidama, SNNP, Oromia, and Somali regions. Around 86 districts have been affected by the cholera outbreak, resulting in 11,960 cases and 169 deaths since August 27, 2022.

Food Security Update/Outlook, June to September 2023

- Belg crops will be harvested between June and August 2023. Production may be impacted by conflict, shortage of agricultural inputs, and displaced populations.
- Belg production makes up a relatively modest portion of Ethiopia's yearly output. The second season of Mehir is from June to August for planting and from October to January for
- The main growing season in Ethiopia is called Kiremt The performance of rainfall between June and September is a major factor in crop productivity.
- Production will be impacted this year by predicted drier conditions in various regions of the nation as well as Shortages of seed and
- In general, Ethiopia is still in serious need of assistance. Given the significant loss of assets and coping mechanisms brought on by the recent drought, substantial advances in food security are not anticipated soon. Significant action is needed to recover livelihoods.

Forced Displacements

- The situation remains unstable in the western part of Oromia, as well as in certain woredas (districts) in East and West Shewa and North Shewa zones
- There have been ongoing attacks by unidentified armed groups (UAG) targeting civilians, leading to continued tension. The region is home to a significant number of internally displaced persons (IDPs) who have been affected by prolonged conflicts and drought, and they still require assistance.
- In various areas of the Amhara region, conflicts with armed groups and tension have persisted. Over the past two years, hundreds of thousands of people have fled the Oromia region for the Amhara region increasing the number of people in need in the latter. The continued influx of people from war-torn Sudan has also added to the situation.

LEARNING WITH JOY

A sixth grader from Sidama region Ethiopia Yanet* wakes up with a sense of excitement, knowing that today she will not only receive an education but also a nourishing meal at school. As she gets ready, she takes extra care to pack her school bag, making sure to include her menstrual hygiene kit provided by Save the Children.

Arriving at school, Yanet is greeted by the familiar faces of her friends, all equally eager for the day ahead. In the classroom, Yanet listens attentively to her teacher, socking up all the knowledge. She knows that education is her ticket to a brighter future, one where she can break free from the cycle of poverty that has plagued her community for generations. And with each passing day, she grows more confident in her abilities and dreams.

Throughout the day, Yanet thrives in her learning environment, fueled by the support and opportunities provided by Save the Children's GPE funded school feeding program. She knows that she is not alone on this journey, that there are people who believe in her potential and are committed to helping her succeed.
